

Installing K7 Enterprise

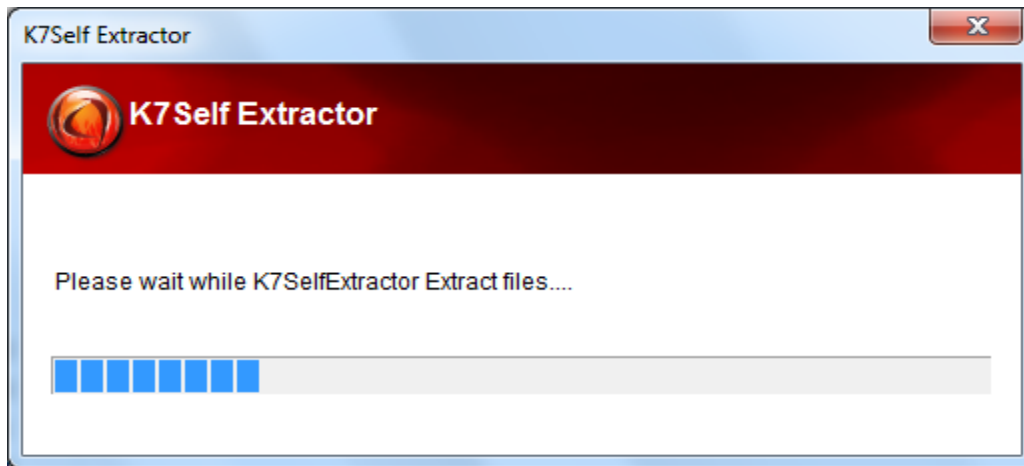

Microsoft® Windows® 7 / Vista / XP / 2003 (SP1) / 2008

Contents

Extracting Files	3
Installation Wizard	3
License Agreement.....	4
Installing Database.....	5
Logon Settings	8
Email Notification Settings	8
Installing K7 Enterprise Security	10

1. Extracting Files

When you double click on K7EnterpriseSecuritySetup.exe it will extract the installation files.

2. Installation Wizard

Once the files are extracted, the installation wizard will be started automatically which will guide the administrator about the installation.

Click on **Next** button to proceed with installation.

3. License Agreement

Please read the license agreement and select the option **I accept the terms in the license agreement** to precede with installation.

If you select the option **I do not accept the terms in the license agreement**, the product won't be installed and the installation wizard will be closed.

4. Installing Database

K7 Enterprise Security setup has a built-in database **Microsoft SQL Server 2005 Express Edition** or else you can use any existing Microsoft SQL Server if you had installed already on your server.

If you select **Microsoft SQL Server 2005 Express Edition**, it will be installed with other prerequisites.

Alternatively if you want to use other existing Microsoft SQL Server Editions, you can select the option accordingly and click **Next**.

In this case you should enter the relevant database server name (with reference) and other credentials as well.
