

## Installation

**Uninstall** any other **Antivirus Software** before you install K7Antivirus.

1. Place the **K7Antivirus** product CD into your CD or DVD drive.
2. A window with multiple options opens up, Click on **Install K7Antivirus**.
3. Please do **NOT** click Cancel button while K7Antivirus Set up loads up.
4. Click **Next** button in the install shield wizard.
5. Please accept the terms in the License Agreement and click **Next**.

**Note:** On clicking " I do not accept the terms in the License Agreement", installation will terminate.

6. The Installer scans your PC for Identified Antivirus software, which are likely to conflict with K7Antivirus. In case you have any of these, please uninstall them and then install K7Antivirus.
7. Please key-in the Registration information and the Serial Number if you have purchased the product or OEM user. If you are a Trial user, leave the boxes blank and click **Next**.
8. The Install shield Wizard is now ready to install the program. Click **Install** to begin Installation.
9. Click **Finish** and restart the computer to complete the process.
10. If your access to the **Net is through a proxy**, please configure its settings in K7Antivirus.

Open **MainConsole > Update Manager > Options**

and enter the Proxy Server details.

Open **Main Console -> Update -> Update Manager-> Options** window

## Updating

Update regularly for strong protection from malware.

### **Automatic Update:**

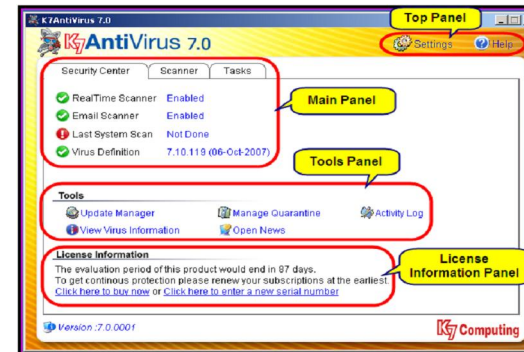

1. Open K7 Antivirus Main console.
2. Click **Updates > Options**.
3. Select the **Enable Automatic Update of the Product when the System Starts** check box and select an Option from the given list.
4. If your Internet connection is through a proxy server, select the check box **Access Internet through a Proxy Server** and enter the details of the proxy server.
5. Click **Close**.
6. Ensure that you are connected to the Internet and click **Start**.
7. Reboot your PC if you are prompted to do so on the completion of the updates.

### **Manual update:**

1. Ensure that you are connected to the Internet and open K7 Antivirus Main console.
2. Click **Updates**.
3. If you connect to the Net through a Proxy Server please provide the proxy details before you **Start** the update.
4. Reboot your PC if you are prompted to do so on the completion of **the updates**.

## Main Console

Start **K7Antivirus 7.0**. The Main console opens. You would be doing this often to change the settings of K7Antivirus.

1. **On the Main Panel** you will find the security status.
2. The **Tools Panel** gives the options to manage updates and quarantine. View Virus information and News from the Tools Panel.
3. The License Information Panel has Registration Information. You have option to purchase or register K7Antivirus by providing the Serial Number.

## Antivirus

### **Run System Scan:**

1. Open K7Antivirus Main Console.
2. Click **Not done** or status option corresponding to the Last system scan.

3. K7 Antivirus Scanner will start scanning your computer and the report will be displayed on the completion of the scan.

### **Perform Quick Scan:**

1. **Right-Click the K7 icon** on the system tray.
2. Click **Scan Critical areas**.
3. **K7 Antivirus Scanner will do a quick scan and the report will be displayed on the completion of the scan.**

### **Scan specific Files/Folders:**

1. Right-click the File/Folder you want to scan.
2. Click **Scan with K7Antivirus**
3. K7 Antivirus Scanner will start scanning the selected file or folder and the report will be displayed on the completion of the scan.

**Note:** In order to scan more than one file/folder select all the items and right click.

### **Respond to a Virus infection:**

1. Open **K7Antivirus** Main Console.
2. Click **Settings** on the **top panel**.
3. Choose one action to take on finding a virus from the given three options.
